狭 翅 夜 蛾 属 一 新 种

(鳞翅目:夜蛾科)

陈一心

(中国科学院动物研究所,北京)

本文记述狭翅夜蛾属一新种,新种的模式标本保存于中国科学院动物研究所。 大狭翅夜蛾 Hermonassa gigantea 新种(图1)

雄性外生殖器钩形 突长, 抱器瓣发达,星长舌形,抱器腹 肥大,向腹端伸出一巨长齿突,

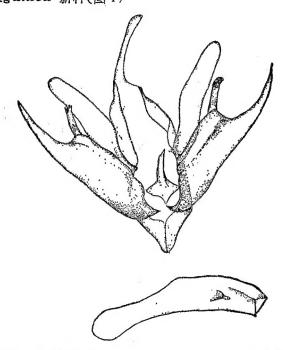

图1 大狭翅夜蛾 Hermonassa gigantea sp. nov. o 外生殖器

抱钩指状,囊形突短,阳茎端基环菱形,但端部伸出一长突,阳茎长,内囊有一长乳头状角状器。

正模♂,四川(灌县青城山 700-1600 米), 1979. V. 31, 尚进文采。

本种与 H. sinuata Moore 近似,主要区别为本种雄性外生殖器的抱器腹有一巨大齿形突,抱钩非弯曲,呈直指状。

A NEW SPECIES OF HERMONASSA FROM CHINA (LEPIDOPTERA: NOCTUIDAE)

CHEN YI-XIN

(Institute of Zoology, Academia Sinica, Beifing)

In this paper a new species of *Hermonassa* is described. The type specimen is deposited in the Institute of Zoology, Academia Sinica.

Hermonassa gigantea sp. nov.

This species is similiar to *Hermonassa sinuata* Moore, but differs from it in its succulus produced into a long arm, projecting to the anal angle of the harp, the clasper being a straight arm.

Holotype of, Sichuan (Guanxian Qingchengshan, 700-1600m.), collected by Shang Jin-wen.
